POSITION	SENIOR JAVA ENTERPRIZE DEVELOPER
JOB NUMBER	3787
NUMBER OF POSITION/S	3
NOC CODE	6733
CLOSING DATE	2020-10-26
LOCATION	Winnipeg, MB Downtown
ACCESSIBLE BY TRANSIT	Yes
HOURS PER WEEK	40
HOURLY WAGE RANGE	TBD
JOB TERMS	Full time
JOB DESCRIPTION	<p>We are looking to hire what could be a large number of Java developers. We are looking for JAVA enterprise developers as well as those JAVA iOS and Android developers.</p> <p>These need to be people with 5+ years of experience and not new to the JAVA development field.</p>
JOB DUTIES	<p>This position includes design and implementation of enterprise-level infrastructure and applications for consumer services. The candidate will work with peers in development and product management to solve complex software engineering problems and proactively propose solutions to address technical challenges and business requirements. The candidate will be expected to quickly become an effective member and eventually a leader within their individual scrum team after a reasonable amount of ramp-up time. After adequate ramp-up time the candidate is expected to come up to speed on the complexities of the PayPal environment but there is a strong expectation that the candidate will be a self-starter and drive their own education We are a global team. Although we expect the team members to be co-located for Scrum delivery, there should be a sense of urgency and behavioral eagerness when it comes to help our global teams. This is what we value within our best engineers!</p> <ul style="list-style-type: none"> <li>· The ideal candidate must have experience in enterprise application design, system performance and scalability.</li> <li>· 6+ year experience in web services, distributed systems, and highly available</li> </ul>

### JOB DUTIES

and scalable applications.

- Strong object-oriented programming skills in Java
- Very good knowledge of Core Java and J2EE and should have worked on high availability, low latency platforms.
- Ability to question status quo and identify bad design/code patterns which can impact performance and maintainability of the code.
- Excellent understanding of system design and design patterns. Previous experience with the Agile methodology.
- Experience in developing robust RESTful services is desirable.
- Have very good communication skills
- Have strong experience in the Spring framework.
- Good experience in SQL/Oracle
- BS degree in computer science or related fields. MS degree desired.

iOS:

Role/ Responsibilities:

- Assist in design and development of PayPal iOS application
- Influencing peers, juniors and seniors both within the organization and across PayPal.- - Native iOS app development and converting ideas, designs and requirements to concrete stable production builds
- Coordinate and collaborate with the Product and Engineering teams to understand problems, come up with creative solutions, and help with tracking and delivering within the release plan Understand and implement iOS specific design patterns
- Collaborate with Engineering and QA to resolve bugs

Desired Skills and Experience:

- At least 5 years of native iOS development experience .
- Extremely comfortable with understanding and implementing internet application with REST services at the backend
- Super awesome at iOS fundamentals, including technologies like UIKit, Core Animation, Auto Layout and Cocoa Touch
- Excellent Swift and Objective-C coding ability along with strong CS & OS fundamentals
- Familiarity with continuous integration (Jenkins), application monitoring (Crashlytics and fabric.io), mocking tools (Appium and Apiary), build tool development and enhancements, using unit testing and cucumber tests for functional tests.
- Extremely comfortable with understanding and implementing client-side handlers for web services with REST services at the backend
- Experience with Cucumber testing framework desired
- B.S. or equivalent degree in Computer Science is desired

Android:

Role/ Responsibilities:

### JOB DUTIES

- Assist in design and development of PayPal Android application
  - Influencing peers, juniors and seniors both within the organization and across PayPal
  - Native Android app development and converting ideas, designs and requirements to concrete stable production builds
  - Coordinate and collaborate with the Product and Engineering teams to understand problems, come up with creative solutions, and help with tracking and delivering within the release plan & Understand and implement Android specific design patterns
  - Collaborate with Engineering and QA to resolve bugs
- Desired Skills and Experience:
- At least 3 years of native Android development experience . 6 years total experience
  - Extremely comfortable with understanding and implementing internet application with REST services at the backend
  - Super awesome with Android concepts like fragments, location services, Google Cloud Messaging API, UI transitions, Image processing and multi threaded communications, among others
  - Familiarity with continuous integration (Jenkins), application monitoring (Crashlytics and fabric.io), mocking tools (Appium and Apiary), build tool development and enhancements, using unit testing and cucumber tests for functional tests
  - Extremely comfortable with understanding and implementing client-side handlers for web services with REST services at the backend
  - Knowledge in Android Studio and GitHub is a huge plus
  - Experience with Cucumber testing framework desired
  - B.S. or equivalent degree in Computer Science is desired

#### Web:

##### Front End Engineer

##### Job Description Summary

We, Consumer Web Engineering Team, are looking for strong JavaScript skills and solid real-world experience. You will need to be able to architect & build solutions to problems with little guidance from others. We're seeking candidates with a strong (node.js) server background as well as those with more front-end experience. Folks strong in either area are welcome to apply

##### Responsibilities:

As a Software engineer, You will work in a fast-paced environment where continuous innovation and experimentations are a given. You will master both established and cutting-edge technologies like JavaScript, Node.js, React.js, Redux, HTML5, CSS3, NoSQL DB like MongoDB. Your responsibilities will also include:

- Design, development and testing of web applications and services following best practices
